SUMMARY

Computer Science Engineering undergraduate (CSE '27) with a strong foundation in Data Structures, Algorithms, and Object-Oriented Design. Experienced in building scalable web applications, procedural generation tools, and data-driven systems. Passionate about leveraging Python, Java, and emerging Data Science methodologies to build robust software solutions and solve complex, real-world problems.

EDUCATION

SRM Institute of Science and Technology
Bachelor of Technology - Computer Science Engineering

Chennai, India
June 2023 - May 2027

TECHNICAL SKILLS

- **Programming Languages:** Python, Java, C, C++, SQL
- **Web Technologies:** React, Next.js, HTML, CSS
- **Databases:** PostgreSQL, SQL
- **Core Competencies:** Data Structures & Algorithms, Object-Oriented Design, Data Science Fundamentals
- **Tools & Frameworks:** Git, Flask, OpenCV, Blender API, WordPress, Docker

PROFESSIONAL EXPERIENCE

Web Developer Intern — *STRCO India Pvt Ltd*

Erode, India — *June 2025 - July 2025*

- Designed and deployed a comprehensive business community platform utilizing WordPress to enhance digital presence and client connectivity.
- Developed both the user-facing landing page and the internal management portal to streamline community operations, user engagement, and content delivery.
- Collaborated in a cross-functional team to gather requirements, implement frontend features, and deliver the project within strict deadlines.

Software Developer Intern — *Shimi Designs and Consulting Engineers Pvt Ltd*

Chennai, India — *2024*

- Engineered a web-based checklist management system to optimize product verification processes and operational workflows.
- Implemented direct Excel and CSV integration to ensure seamless data logging, storage, and reporting for internal engineering teams.
- Created an intuitive web interface tailored for efficient data entry and export functionality.

PROJECTS

Automated Architectural Visualization Platform for Generating Interactive Three-Dimensional Environments from Two-Dimensional Floor Plans Using Structured Data-Driven Procedural Modeling — *Final Year Project*

- Engineered a Python and Blender API pipeline to procedurally translate 2D CAD (.DXF) schematics into navigable 3D models using `ezdxf`.
- Integrated AI style generation and automated object placement, optimizing the Blender Eevee engine for efficient rendering.

Crowdsourced Civic Issue Reporting Platform — *Independent Web App*

- Deployed a full-stack web application enabling citizens to report, track, and manage local infrastructure issues in real-time.

Face Recognition Attendance System — *Academic Project*

- Built a real-time OpenCV facial detection application achieving 95% accuracy, backed by a SQL database for scalable, asynchronous attendance logging.

HACKATHONS & EXTRACURRICULAR

- **TechHacks National Level Hackathon (2nd Runner-Up, 2024):** Developed a predictive machine learning model for Irrigation Lake Maintenance Cost Prediction.
- **VIT Hackathon (Participant):** Built a Fake News Detection System utilizing algorithmic verification to classify and flag unverified or misleading information sources.
- **Sketch Club (Video Editor, 2024):** Edited promotional and event videos, enhancing club engagement and visibility across campus.
